

# Center for International Student Engagement

Noah Aube, Brandt Dudziak, Billy Jang, Shukry Zablah

# Goal of the Project

Create a database to help the CISE organize, track and manage international students' data and processes.

Centralize international student records including visas, I-20s, and work authorizations.

Allow data and note keeping with multiple levels of administrative access.

Track student immigration processes, and generate reminders of important dates and steps.

# User Interactions with the Database

Administrators will be able to view, update and generate student records, both individually and en masse.

Administrators will be able to attach files, such as images of documents, to a student's record.

Student Employees will be able to add notes about student processes, without having access to read existing notes.

Administrators will be able to view and edit all notes.

Automated email reminders may also be sent via the software.

# Current State of the Data

Details of student records are currently organized using excel.

Notes are also kept in excel, currently without the levels of administrative access CISE would eventually like to see.

Files and images are stored, but not effectively organized or secured.

# Software We Plan to Use

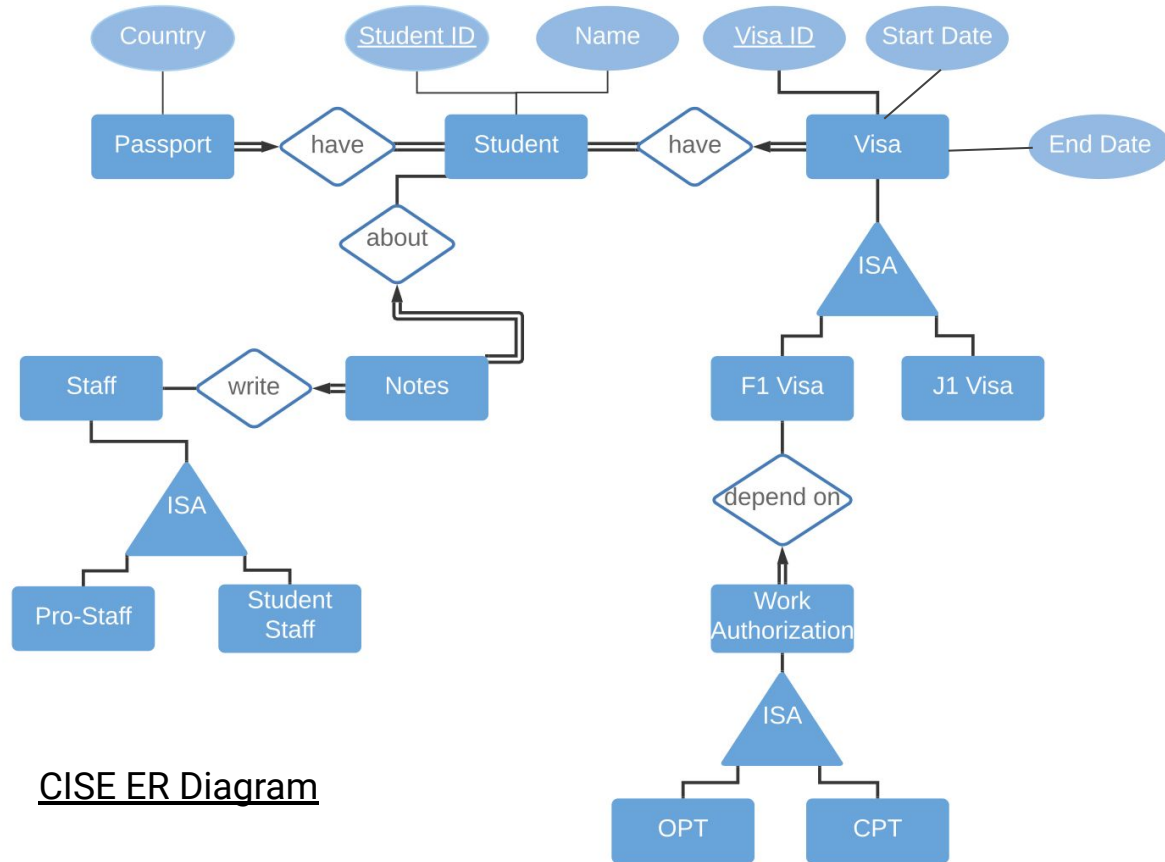

HTML/CSS for frontend web app

PostgreSQL (obviously)

Git

More as we develop
